

A Comprehensive Assessment of Idaho's Correctional Programs

Justice Program Assessment Findings and Recommendations

September 17, 2015

Idaho's Justice Reinvestment Act (Senate Bill 1357)

- Faced with one of the fastest-growing prison populations in the nation, the Idaho State Legislature enacted the Justice Reinvestment Act (SB 1357) in March 2014.
- The policy framework primarily aims to:
 - Strengthen probation and parole
 - Structure parole decision-making
 - Measure recidivism-reduction efforts
- With successful implementation of the SB 1357 policy framework, the state is projected to avert between **\$134 - \$157 million in prison spending** between 2015-2019 and **reduce recidivism by 15%** within the same time period.

CSG Justice Center 2

Why conduct an assessment of programming?

- IDOC invests significant resources in programming for individuals under correctional supervision and wants to ensure that these investments are maximized to reduce recidivism.

- ID is currently investing about:
 - \$7 million in community-based SUDS funding
 - \$2.6 million in prison-based programming

\$9.6 million

Estimate of FY15 Total Program Spending

CSJ Justice Center

10

Idaho has a complicated Pathways programming system that appears tailored to individuals' risk and needs...

In reality, several Pathways are not being used and others duplicate services

12

Similar duplication of services exists for sex offenders

SOTP Pathways

CSG Justice Center

13

What do we mean by risk and why does it matter?

Risk ?

Lack of meaningful categories among individuals can lead to:

- ⚠ Over-treating/ over-supervising
- ⚠ Under-treating/under-supervising
- ⚠ Scarce resources are wasted
- ⚠ Inconsistency in supervision practices

CSG Justice Center

14

Assessing for risk results in categories of like individuals

Risk ?

Risk assessment

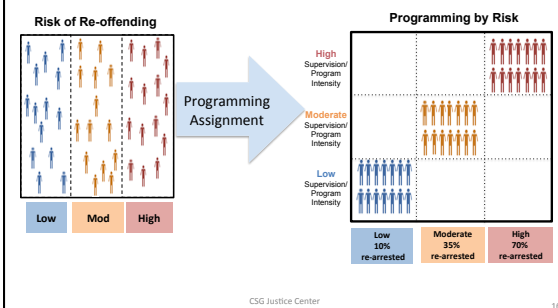

Risk of Re-offending

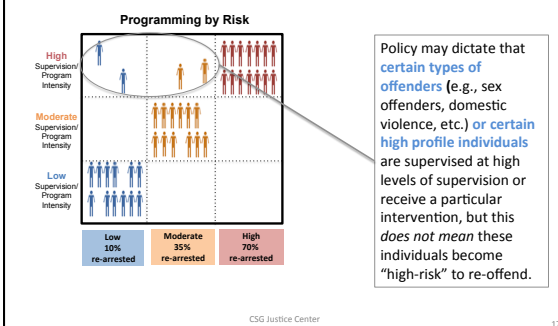

CSG Justice Center

15

Focus programming according to risk, with higher-risk individuals receiving higher intensity interventions

Policy may dictate more intensive programming or supervision, but this does not change a person's risk score

1. Who is receiving programming?

The goal: prioritize programming resources for individuals who are most likely to reoffend.

Research indicates that targeting moderate and high risk individuals for programming can have a substantial impact on recidivism reduction. Targeting low risk individuals for programming has the potential to increase recidivism.¹

Addressing multiple criminogenic needs will have a greater impact on reducing recidivism for moderate and high risk individuals than only addressing one criminogenic need, or multiple non-criminogenic needs.²

1. Christopher T. Lowenkamp, Edward J. Latessa and Alexander M. Holsinger, "The Risk Principle in Action: What Have We Learned from 13,676 Offenders and 97 Correctional Programs?" *Crime and Delinquency*, 52, no. 1 (2006): 77-93.

2. D. A. Andrews and James Bonta, *The Psychology of Criminal Conduct*, 5th ed. (New Providence, NJ: Matthew Bender & Company, Inc., 2010).

1. Who: Summary of findings

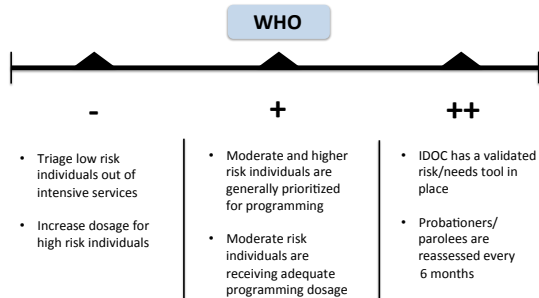

- IDOC is using a validated tool to make meaningful risk/needs based programming decisions, but lacks a mechanism to track program availability for moderate and high risk individuals both in prison and in the community.
- Low risk individuals may receive intensive programming, which has the potential to increase overall risk.

20

Criminogenic needs should drive programming decisions

The Predictors of Recidivism: LSI-R Subdomains

Recidivism	Risk / Need	Programmatic Response
More Predictive	<ul style="list-style-type: none"> • Criminal thinking/ personality, criminal friends* • Substance Abuse 	<ul style="list-style-type: none"> • Cognitive-behavioral • Treatment / relapse prevention
Less Predictive	<ul style="list-style-type: none"> • Family / Marital • Education / Employ. • Leisure / Rec 	<ul style="list-style-type: none"> • Family reunification • Life skills, job skills • GED / other

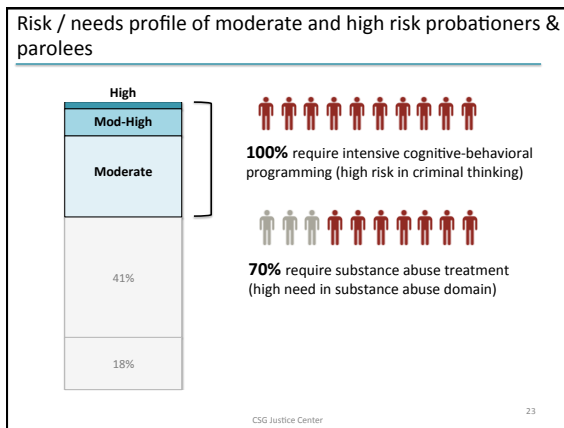

Dosage:
100+ hrs Mod
200+ hrs High

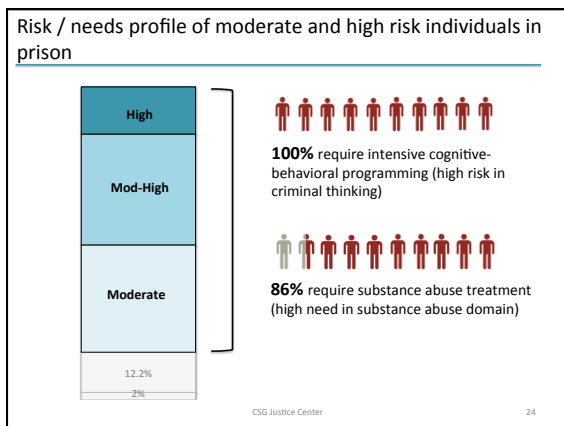

* Included factors: Companions, Antisocial cognitions, Antisocial personality, Criminal History

CSG Justice Center

21

2. What types of programming are provided?

The goal: reliance on programming that has a demonstrated impact on reducing recidivism and / or use a research-driven approach.

CSG Justice Center

25

What research are we using?

Formal Evaluations

- Programs that have been formally evaluated to reduce recidivism by an unbiased source, using a rigorous research method, and across multiple sites are the most likely to achieve positive results when replicated.
- CSG Justice Center staff reviewed all available meta-analyses and summaries of research on program models.*

Adherence to effective practices

- Across program types, researchers have identified certain approaches that are more likely to reduce recidivism (e.g., items on the CPC).
- The most effective modality for addressing criminal thinking is cognitive-behavioral approach.⁴

*Sources: NREPP - What Works in Reentry Clearinghouse - Crime Solutions - Results First Clearinghouse Database - Psychology of Criminal Conduct (Andrews & Bonta)
Meta-analyses from journals: Crime and Delinquency - Journal of Experimental Criminology - Journal of Drug Issues
4. D. A. Andrews and James Bonta, *The Psychology of Criminal Conduct*, 5th ed. (New Providence, NJ: Mathew and Bender & Company, Inc., 2010).

26

2. What: Summary of findings

- IDOC has made a substantial effort to adopt programs that are marketed as “effective” at reducing recidivism.
- Upon closer review, many of these programs rely on approaches that are outdated or less impactful than research-driven alternatives.
- 9 out of 12 program curricula currently offered have not been evaluated or rely on a modality that is limited in its ability to reduce recidivism.*

*Several Rider curricula were not included as they were outside the scope of this assessment

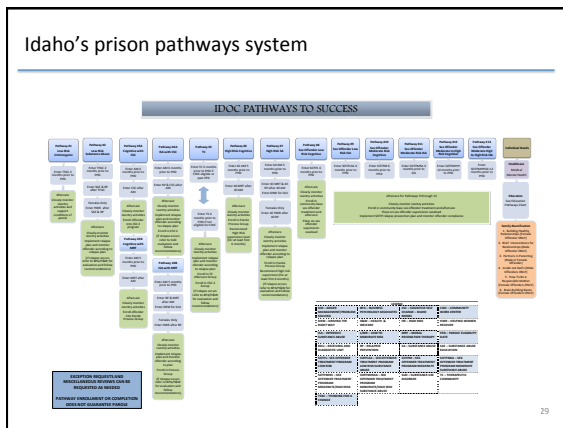

27

WHAT: Effectiveness of current practices

WHAT

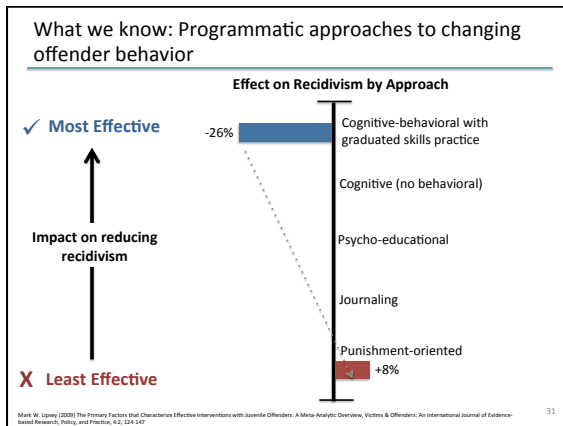

-	+	++
<ul style="list-style-type: none"> Migrate to programs that have been formally evaluated or adhere to EBP Programming should rely largely on cognitive-behavioral approach Offer substance use disorder treatment at varying levels of care 	<ul style="list-style-type: none"> Programming in the community is coordinated as aftercare of prison programming 	<ul style="list-style-type: none"> Program staff are supportive of a rehabilitative approach Program staff make a concentrated effort to engage individuals in prosocial group activities

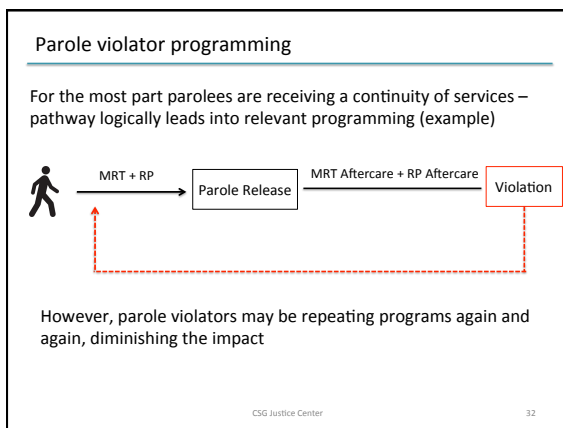

CSJ Justice Center 28

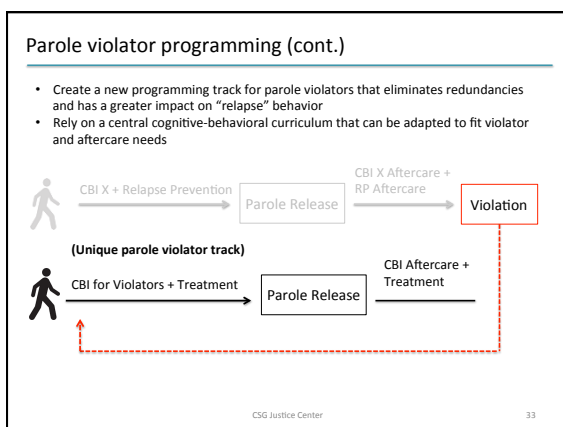

Moderate and high risk individuals receive the same programs in "general pathways" as they do in Therapeutic Communities

	General Pathway (4a)	Therapeutic Community (5)
	<ul style="list-style-type: none"> Mod – High Risk Mod – High SA Need 	<ul style="list-style-type: none"> Mod – High Risk Mod – High SA Need
Prison		
Anger Management	12 hours	12 hours
Relapse Prevention	51 hours	51 hours
Cognitive Self-Change (CSC)	51 - 78 hours	51 - 78 hours
Community		
Aftercare	64 – 96 hours	116 – 144 hours
	= 178 - 237 hours	= 230 - 285 hours
	23% recidivism rate	28% recidivism rate

3. How well are programs are programs being delivered?

The goal: ensuring that programs are being implemented with quality and fidelity, and that outcomes are being tracked.

Assessment

- Programs are routinely assessed for quality
- Programs that fail to meet quality standards are subject to a CQI process

Training

- Facilitators are trained regularly in evidence-based curricula
- Program evaluators are trained in validated program assessment tool

Data Monitoring

- Program attendance and quality of participation are tracked, by individual
- Program completion is tracked, by individual
- Recidivism measures are adopted and tracked, by individual and by type of program

CSG Justice Center

34

3. How well: Summary of findings

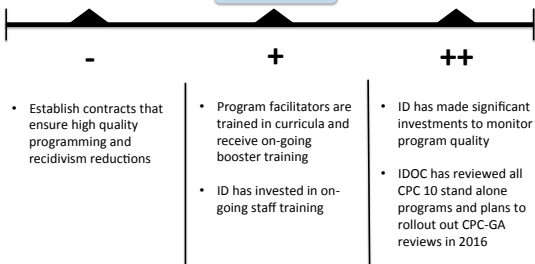

- In 2014, the Idaho state legislature invested \$500,000 to support officer training through the Justice Reinvestment Act.
- IDOC allocated a portion of these funds to train a large cadre of staff (30+ individuals) on the Correctional Program Checklist (CPC) in an effort to evaluate and improve the quality of programs.
- The CPC is a validated program evaluation tool. Programs that score in the effective or highly effective range on the Correctional Program Checklist (CPC) and CPC-Group Assessment (CPC-GA) are more likely to reduce recidivism.
- 10 stand alone programs have been evaluated to date.

CSG Justice Center

38

What should a new programming system look like?

Recommendation for a new programming system

Adopt a "menu" of program options that are:

Research-driven and proven to impact moderate and high risk recidivism

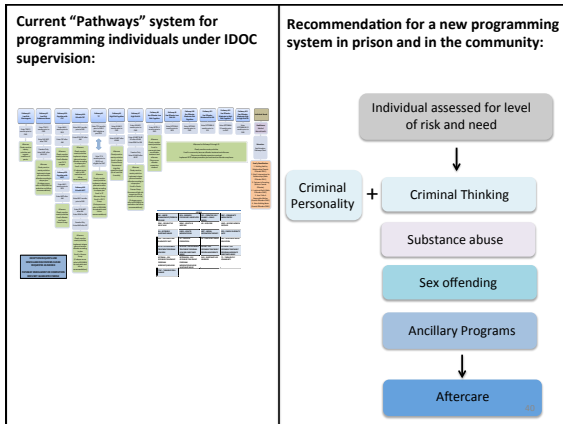

Universally available across the state at all facilities and probation and parole offices

Responsive to individual risk and need over time and adaptable for an aftercare setting or for individuals who violate supervision
